The Digital Remote is specifically designed for use with the F2R γ1000 device by wire.

Assembling the Remote.

- Place the remote on the the 22mm handlebar, next to the left grip, and tighten the M6 bolt to secure it.

- Connect the remote's blue connector securely to the F2R Y1000 blue connector.

- Once connected, the remote will automatically start working and adapt to the active Android app.

Compatible Apps and Buttons functions

This information is available under "Remote Profiles" in the My Gamma App on your Y1000 device.

Apps and functions are continously updated.

The "remote profiles" section provides information only. The remote will automatically adapt to the active Android app.

Toggle protection

The toggle protection is pre-installed on the remote.

If you prefer to ride without it, you can remove it by loosening the two M3x6 bolts.

Riding without the toggle protection will not cause any damage to the remote. However, in the event of a crash, the toggle will be more exposed and may be damaged.

Package Includes:

- DR001 remote and connection cable.
- Fixing clamp and M6x16 bolt.
